Mini rotators and pan-and-tilts built to conserve space and weight

✦ Miniature by Design

Our HammerHead positioners are uniquely small, allowing for use in **compact spaces** or where extra weight would be an issue. These positioners range from 109–167 mm in height, and the heaviest positioner is only 3.2 kg in weight.

🎯 Go-To Functionality

These rotators and pan & tilt units feature go-to functionality, which allows you to pre-program your lighting and camera positioning for coordinated, **automated movements** at the touch of a button.

⚙️ Tailor-Made Tech

We have a wide breadth of knowledge and practical experience within our small team, so we are not afraid of new R&D or customization of existing products. Most of our competitors fiercely avoid this, but we **embrace it**. Our nimble, agile team is able to take action and change designs easily.

PRODUCT COMPARISON

Compare our positioners with our comparison table. ▶

Arctic Rays specializes in deep-sea lighting and imaging systems and other custom solutions specifically for use on AUVs, ROVs, manned submersibles and other offshore and underwater structures

Think deep.
